

# Solenoid directional valves type DHI

direct, spool type

Spool type, two or three position, direct operated valves with solenoids certified according the North American standard cURus.

Solenoids ② are made by:

- wet type flanged tube, same for AC and DC power supply, with integrated manual override pin 4
- interchangeable coils, specific for AC or DC power supply, easily replaceable without tools - see section 5 for available voltages

Standard coils protection IP65, optional coils with IP67 AMP Junior Timer, XK Deutsch or Lead Wire connections.

Wide range of interchangeable spools ①, see section 2

The valve body (3) is 3 chamber type made by shell-moulding casting with wide internal passages.

Mounting surface: ISO 4401 size 06

Max flow: 60 I/min Max pressure: 350 bar

**DHI - 0** 

Directional control valves size 06

Valve configuration, see section 2

61 = single solenoid, center plus external position, spring centered

77 = double solenoid, center plus external position, without springs

**63** = single solenoid, 2 external positions, spring offset 67 = single solenoid, center plus external position, spring offset

71 = double solenoid, 3 positions, spring centered

75 = double solenoid, 2 external positions, with detent

**70** = double solenoid, 2 external positions, without springs

#### 4 NOTES

#### Options

WP

= Solenoid mounted at side of port B (only for single solenoid valves). In standard versions, solenoid is mounted at side of port A. = prolonged manual override protected by rubber cap - see section [11].

The manual override operation can be possible only if the pressure at T port is lower than 50 bar.

The manual override operation can be possible only if the pressure at 1 port is lower than 30 par.

MV, MO = auxiliary hand lever positioned vertically (MV) or horizontally (MO). For available configuration and dimensions see table E138.

WPD/H = manual override with detent, to be ordered separately, see tab. K150

## Special shaped spools

- spools type 0 and 3 are also available as 0/1 and 3/1 with restricted oil passages in central position, from user ports to tank.
- spools type 1, 4, 5 and 58 are also available as 1/1, 4/8, 5/1 and 58/1. They are properly shaped to reduce water-hammer shocks during the
- spools type 1, 3, 8 and 1/2 are available as 1P, 3P, 8P and 1/2P to limit valve internal leakages.
- spool type 1/9 has closed center in rest position but it avoids the pressurization of A and B ports due to the internal leakages.
- Other types of spools can be supplied on request.

Coil can be supplied also with 60 Hz of voltage frequency: in this case the performances are reduced by 10÷15% and the power consumption is 55 VA Average values based on tests preformed at nominal hydraulic condition and ambient/coil temperature of 20°C. When solenoid is energized, the inrush current is approx 3 times the holding current. Inrush current values correspond to a power consumption of about 150 VA.

## 7 OPERATING LIMITS based on mineral oil ISO VG 46 at 50°C

The diagrams have been obtained with warm solenoids and power supply at lowest value (Vnom - 10%). The curves refer to application with symmetrical flow through the valve (i.e. P→A and B→T). In case of asymmetric flow and if the valves have the devices for controlling the switching times the operating limits must be reduced.

#### DHI

| Curv | e Spool type   |
|------|--|
| Α    | 0, 1, 1/2, 8   |
| В    | 0/1, 0/2, 1/1, 1/9, 3, 3/1   |
| С    | 4, 4/8, 5, 5/1, 6, 7, 16, 17, 19, 39, 49, 58, 58/1, 09, 90, 91, 93, 94 |
| D    | 2, 2/2   |

## 8 SWITCHING TIMES (average values in msec)

| Valve            | Switch-on<br>AC | Switch-on<br>DC | Switch-off |  |
|------------------|-----------------|-----------------|------------|--|
| DHI + 666<br>667 | 30              | 45              | 20         |  |
| DHI + 669        | 45              | _               | 80         |  |
| DHI + E-SD       | 30              | 45              | 50         |  |

Test conditions:

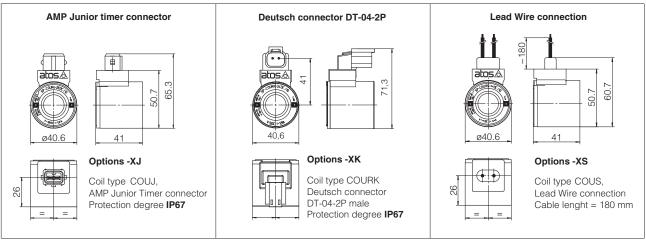

- 36 l/min; 150 bar
- nominal voltage
- 2 bar of counter pressure on port T mineral oil: ISO VG 46 at 50°C.

The elasticity of the hydraulic circuit and the variations of the hydraulic characteristics and temperature affect the response time.

## 9 SWITCHING FREQUENCY

| Valve           | AC<br>(cycles/h) | DC<br>(cycles/h) |  |
|-----------------|------------------|------------------|--|
| DHI + 666 / 667 | 7200             | 15000            |  |

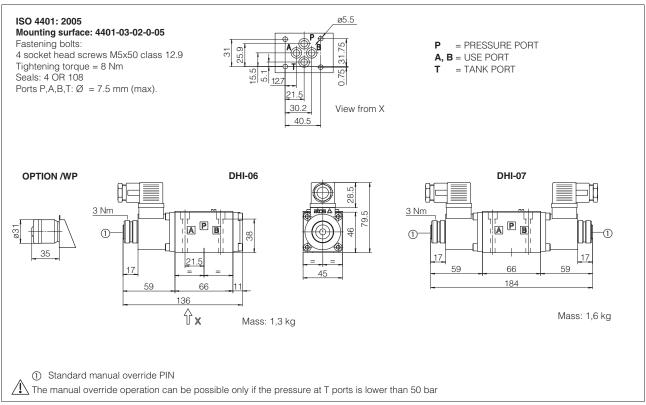

#### 10 COILS WITH SPECIAL CONNECTORS only for voltage supply 12, 14, 24, 28 VDC

Note: For the electric characteristics refer to standard coils features - see section 5

#### 11 DIMENSIONS [mm]

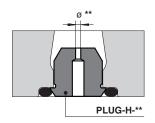

Overall dimensions refer to valves with connectors type 666

## 12 PLUG-IN RESTRICTOR (to be ordered separately)

The use of plug-in restrictors in valve's ports P or A or B may be necessary is case of particular conditions as long flexible hoses or the presence of accumulators which could cause at the valve switching instantaneous high flow peaks over the max valve's operating limits.

## 13 ELECTRIC CONNECTORS ACCORDING TO DIN 43650 (to be ordered separately, see tech table K500)

666 = standard connector IP-65, suitable for direct connection to electric supply source

667 = as 666, but with built-in signal led. Available for power supply voltage 24 AC or DC, 110 AC or DC, 220 AC or DC

669 = with built-in rectifier bridge for supplying DC coils by alternate current (AC 110V and 230V - Imax 1A)

E-SD = electronic connector which eliminates electric disturbances when solenoid valves are de-energized

#### 14 MOUNTING SUBPLATES

| Model  | Ports location                                    | GAS Ports<br>A-B-P-T | Ø Counterbore<br>[mm]<br>A-B-P-T | Mass<br>[kg] |
