

Proportional directional valve type DHZO-A(E)-060-S3

single solenoid, without position transducer, 3 position

Available only on request

DHZO-A-060 is a direct operated proportional valve, without position transducer, which provides both directional and not compensated flow control according to the electronic reference signal.

Technical characteristics:

It is derived from standard DHZO execution, but with single solenoid and 3 position progressive spool with zero overlap in the intermediate configuration. This feature makes the valve suitable for cost effective closed loop position controls.

It is available in different executions:

-A, without position transducer

-AE, as -A plus integral electronics

Applications:

Mobile machines, sky-lifts.

Mounting surface: **ISO 4401, size 06**

Max flow: **28 l/min** at Δp 30 bar

Max pressure: **350 bar**
