# 2 OFF-BOARD ELECTRONIC DRIVERS - only for A

Drivers model	E-MI-A	E-MI-AC-01F		E-MI-AS-IR		AS-PS	E-BM-AES
Туре	Ana	Analog		Digital			
Voltage supply (VDC)	12	24	12	24	12	24	24
Valve coil option	/6	std	/6	std	/6	std	std
Format		plug-in te		o solenoid		DIN-rail	panel
Data sheet	G010		G020		G030		GS050

# 3 GENERAL NOTES

Atos digital proportionals valves are CE marked according to the applicable directives (e.g. Immunity and Emission EMC Directive). Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in tech table FS900 and in the user manuals included in the E-SW-\* programming software.

#### 4 VALVE SETTINGS AND PROGRAMMING TOOLS

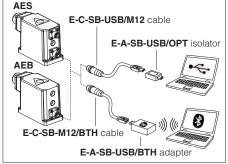

Valve's functional parameters and configurations, can be easily set and optimized using Atos E-SW programming software connected via USB port to the digital driver (see table FS900). For fieldbus versions, the software permits valve's parameterization through USB port also if the driver is connected to the central machine unit via fieldbus

The software is available in different versions according to the driver's options (see table GS500):

E-SW-BASIC	support:	NP (USB)	PS (Serial)	IR (Infrared)
E-SW-FIELDBUS	support:	BC (CANopen)	BP (PROFIBUS DP)	EH (EtherCAT)
		EW (POWERLINK)	EI (EtherNet/IP)	EP (PROFINET)
E-SW-*/PQ	support:	valves with SP, SF, S	SL alternated control (e	e.g. E-SW-BASIC/PQ)

WARNING: drivers USB port is not isolated! For E-C-SB-USB/M12 cable, the use of isolator adapter is highly recommended for PC protection

**USB or Bluetooth connection** 

WARNING: see tech table GS500 for the list of countries where the Bluetooth adapter has been approved

# 5 FIELDBUS - only for AES, see tech. table GS510

Fieldbus allows valve direct communication with machine control unit for digital reference, valve diagnostics and settings. These execution allow to operate the valves through fieldbus or analog signals available on the main connector.

#### 6 GENERAL CHARACTERISTICS

Assembly position	Any position				
Subplate surface finishing to ISO 4401	Acceptable roughness index: Ra $\leq$ 0,8, recommended Ra 0,4 – Flatness ratio 0,01/100				
MTTFd valves according to EN ISO 13849	150 years, see technical table P007				
Ambient temperature range	A:Standard = $-20^{\circ}C \div +70^{\circ}C$ /PE option = $-20^{\circ}C \div +70^{\circ}C$ /BT option = $-40^{\circ}C \div +60^{\circ}C$ AEB, AES:Standard = $-20^{\circ}C \div +60^{\circ}C$ /PE option = $-20^{\circ}C \div +60^{\circ}C$ /BT option = $-40^{\circ}C \div +60^{\circ}C$				
Storage temperature range	A:Standard = $-20^{\circ}C \div +80^{\circ}C$ /PE option = $-20^{\circ}C \div +80^{\circ}C$ /BT option = $-40^{\circ}C \div +70^{\circ}C$ AEB, AES:Standard = $-20^{\circ}C \div +70^{\circ}C$ /PE option = $-20^{\circ}C \div +70^{\circ}C$ /BT option = $-40^{\circ}C \div +70^{\circ}C$				
Surface protection	Zinc coating with black passivation, galvanic treatment (driver housing for AEB and AES)				
Corrosion resistance	Salt spray test (EN ISO 9227) > 200 h				
	CE according to EMC directive 2014/30/EU (Immunity: EN 61000-6-2; Emission: EN 61000-6-3)				
Compliance	RoHS Directive 2011/65/EU as last update by 2015/65/EU				
	REACH Regulation (EC) n° 1907/2006

<sup>10.1</sup> Regulation diagrams - values measure at  $\Delta p$  30 bar P-T

Note: Hydraulic configuration vs. reference signal for configuration 71 and 73 (standard and option /B)

Reference signal  $\begin{array}{c} 0 \div +10 \ V \\ 12 \div 20 \ mA \end{array}$  P  $\rightarrow$  A / B  $\rightarrow$  T

Reference signal  $\begin{array}{c} 0 \div -10 \text{ V} \\ 12 \div 4 \text{ mA} \end{array} P \rightarrow B / A \rightarrow T$ 

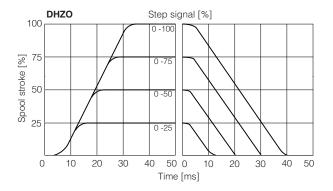

#### 10.2 Flow /Ap diagrams - stated at 100% of valve stroke

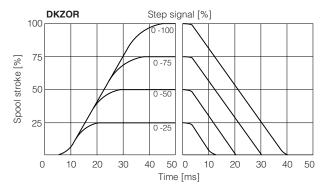

#### DKZOR DHZO DHZO = spool L14 $\mathbf{2} = \text{spool L1}$ = spool S2 4 = spool L3, S3, D3 Flow rate [I/min] 5 = spool L5, S5, D5 Flow rate [I/min] DKZOR 6 = spool S3, L3, D3 7 = spool S5, L5, D5 10 200 300 200 300 Valve pressure drop $\Delta p$ [bar] Valve pressure drop $\Delta p$ [bar] **10.3 Operating limits** DHZO DKZOR DHZO = spool L14 Valve pressure drop Ap [bar] = spool L1 Valve pressure drop ΔP [bar] = spool S2 **4** = spool L3, S3, D3 **5** = spool L5, S5, D5 DKZOR = spool S3, L3, D3 **7** = spool S5, L5, D5

#### 10.4 Response time

The response times in below diagrams are measured at different steps of the reference input signal. They have to be considered as average values. For the valves with digital electronics the dynamics performances can be optimized by setting the internal software parameters.

Flow rate [l/min]

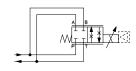

Flow rate [l/min]

#### 10.5 Operation as throttle valve

Single solenoid valves configuration 51 and 53 can be used as simple throttle valves: Pmax = 250 bar (option /Y advisable)

Max flow	SPOOL TYPE					
Δp= 15 bar [l/min]	L14	L1	S2	L3 S3	L5 S5	
DHZO	4	16	28	60	100	
DKZOR	-	-	-	160	200	

# 11 HYDRAULIC OPTIONS

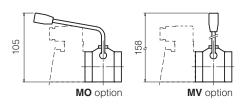

- **B** = DHZO-05 and DKZOR-15 = solenoid and on-board digital driver at side of port A. DHZO-07 and DKZOR-17 = on-board digital driver at side of port A.
- Y = External drain advisable when the valve is used in double flow path, see section 10.5. This option is mandatory if the pressure in port T exceeds 210 bar.

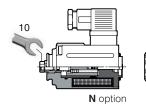

Hand lever option - only for DHZO-A with spool type S3, S5, D3, D5, L3, L5. It allows to operate the valve in absence of electrical power supply For detailed description of DHZO-A with hand lever option see tech. table E138.

- MO = Horizontal hand lever
- BMO = Horizontal hand lever installed at side of port A
- **MV** = Vertical hand lever
- BMV = Vertical hand lever installed at side of port A

The following supplementary options allow to operate DHZO-A and DKZOR-A in absence of electrical power supply by means of a micrometric screw replacing the standard solenoid manual override, see tech. table TK150

- Ν = Manual micrometric adjustment
- NV = As option /N plus handwheel and graduated scale

#### 12 ELECTRONICS OPTIONS - only for AEB and AES

I = This option provides 4 ÷ 20 mA current reference and monitor signals, instead of the standard ±10 VDC.

Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 VDC or ±20 mA.

It is normally used in case of long distance between the machine control unit and the valve or where the reference signal can be affected by electrical noise; the valve functioning is disabled in case of reference signal cable breakage.

 $\mathbf{Q}$  = This option permits to inhibit the valve function without removing the power supply to the driver. Upon disable command the current to the solenoid is zeroed and the valve's spool moves to rest position. The option /Q is suggested for all cases where the valve has to be frequently inhibited during the

machine cycle - see 15.5 for signal specifications.

Z = This option provides, on the 12 pin main connector, the following additional features: Fault output signal - see 15.6 Enable input signal - see above option /Q Power supply for driver's logics and communication - see 15.2

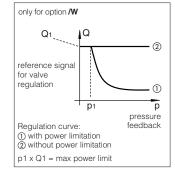

C = Only in combination with option /W This option is available to connect pressure transducers with 4 ÷ 20 mA current output signal, instead of the standard ±10 VDC. Input signal can be reconfigured via software selecting between voltage and current, within a

maximum range of ±10 VDC or ±20 mA

W = Only for valves coupled with pressure compensator, see tech table D150. It provides the hydraulic power limitation function. The driver receives the flow reference signal by the analog input INPUT+ and a pressure transducer, installed in the hydraulic system, has to be connected to the driver's analog input TR. When the actual requested hydraulic power  $\mathbf{p} \times \mathbf{Q}$  (TR x INPUT+) reaches the max power limit (p1xQ1), internally set by software, the driver automatically reduces the flow regulation of the valve. The higher is the pressure feedback the lower is the valve's regulated flow:

PowerLimit [sw setting] Flow regulation = Min ( ; Flow Reference [INPUT+]) Transducer Pressure [TR]

# 13 POSSIBLE COMBINED OPTIONS

Hvdraulic options: all combination possible Electronics options: /IQ, /IZ, /IW, /CW, /CWI

#### 14 COIL VOLTAGE OPTIONS - only for A

6 = Optional coil to be used with Atos drivers with power supply 12 VDC.

18 = Optional coil to be used with electronic drivers not supplied by Atos, with power supply 24 VDc and with max current limited to 1A.

#### UAB "Domingos prekyba" www.dominga.lt/eshop email: info@dominga.lt

INDUSTRY SERVICE Savanoriu pr. 187- 4 korp., LT-02300 Vilnius, Lietuva, tel.; +370 5 2322231, faks, + 370 5 2648229

# 15 POWER SUPPLY AND SIGNALS SPECIFICATIONS - only for AEB and AES

Generic electrical output signals of the valve (e.g. fault or monitor signals) must not be directly used to activate safety functions, like to switch-ON/OFF the machine's safety components, as prescribed by the European standards (Safety requirements of fluid technology systems and components-hydraulics, EN-982).

#### 15.1 Power supply (V+ and V0)

The power supply must be appropriately stabilized or rectified and filtered: apply at least a 10000  $\mu$ F/40 V capacitance to single phase rectifiers or a 4700  $\mu$ F/40 V capacitance to three phase rectifiers. In case of separate power supply see 15.2.

A safety fuse is required in series to each power supply: 2,5 A time lag fuse.

#### 15.2 Power supply for driver's logic and communication (VL+ and VL0) - only for /Z and /W options

The power supply for driver's logic and communication must be appropriately stabilized or rectified and filtered: apply at least a 10000  $\mu$ F/40 V capacitance to single phase rectifiers or a 4700  $\mu$ F/40 V capacitance to three phase rectifiers. The separate power supply for driver's logic on pin 9 and 10, allow to remove solenoid power supply from pin 1 and 2 maintaining active the diagnostics, USB and fieldbus communications.

A safety fuse is required in series to each driver's logic and communication power supply: 500 mA fast fuse.

# 15.3 Reference input signal (INPUT+)

The driver controls in closed loop the current to the valve proportionally to the external reference input signal.

Reference input signal is factory preset according to selected valve code, defaults are ±10 Vpc for standard and 4 ÷ 20 mA for /l option. Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 Vpc or ± 20 mA. Drivers with fieldbus interface (BC, BP, EH) can be software set to receive reference signal directly from the machine control unit (fieldbus reference). Analog reference input signal can be used as on-off commands with input range 0 ÷ 24Vpc.

#### 15.4 Monitor output signals (MONITOR and MONITOR2)

The driver generates an analog output signal (MONITOR) proportional to the actual coil current of the valve; the monitor output signal can be software set to show other signals available in the driver (e.g. analog reference, fieldbus reference).

Monitor output signal is factory preset according to selected valve code, default settings is ±5 Vbc (1V = 1A).

Output signal can be reconfigured via software, within a maximum range of ±5 Vpc.

#### Option /W

The driver generates a second analog output signal (MONITOR2) proportional to the actual system pressure.

The output maximum range is  $\pm 5$  Vpc; default setting is 0  $\div$  5 Vpc.

### 15.5 Enable input signal (ENABLE) - not for standard

To enable the driver, supply a 24 Vbc on pin 3 (pin C): Enable input signal allows to enable/disable the current supply to the solenoid, without removing the electrical power supply to the driver; it is used to active the communication and the other driver functions when the valve must be disabled for safety reasons. This condition **does not comply** with norms IEC 61508 and ISO 13849. Enable input signal can be used as generic digital input by software selection.

#### 15.6 Fault output signal (FAULT) - only for /Z and /W options

Fault output signal indicates fault conditions of the driver (solenoid short circuits/not connected, reference signal broken for 4 ÷ 20 mA input, etc.). Fault presence corresponds to 0 Vpc, normal working corresponds to 24 Vpc. Fault status is not affected by the Enable input signal.

#### 15.7 Remote pressure transducer input signal (TR+) - only for /W option

Analog pressure transducers can be directly connected to the driver (see 16.4).

Analog input signal is factory preset according to selected driver code, defaults are  $0 \div 10$  Vbc for standard and  $4 \div 20$  mA for /C option. Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 Vbc or ± 20 mA. Note: transducer feedback can be read as a digital information through fieldbus communication - software selectable.

Conductor size	0,5 mm <sup>2</sup> to 1,5 mm <sup>2</sup> - available for 12 wires	0,14 mm² to 0,5 mm² - available for 9 wires 0,5 mm² to 1,5 mm² - available for 3 wires		
Connection type	to crimp	to crimp		
Protection (EN 60529) IP 67		IP 67		

# 17.3 Fieldbus communication connectors - only for AES

CONNECTOR TYPE BC CANopen (1)		BP PROFIBUS DP (1)		EH EtherCAT (2)		
CODE	C1) ZM-5PF	C2 ZM-5PM	C1 ZM-5PF/BP	C2 ZM-5PM/BP	C1 C2	ZM-4PM/E
Туре	5 pin female straight circular	5 pin male straight circular	5 pin female straight circular	5 pin male straight circular		4 pin male straight circular
Standard	M12 coding A – IEC 61076-2-101		M12 coding B – IEC 61076-2-101		M12 co	ding D – IEC 61076-2-101
Material	Metallic		Metallic			Metallic
Cable gland	Pressure nut - cable diameter 6÷8 mm		Pressure nut - cable diameter 6÷8 mm		Pressure n	ut - cable diameter 4÷8 mm
Cable	CANbus Standard (DR 303-1)		PROFIBUS DP Standard		Ethe	ernet standard CAT-5
Connection type screw terminal		screw terminal			terminal block	
Protection (EN 60529) IP67		IP 67			IP 67	

(1) E-TRM-\*\* terminators can be ordered separately - see tech table GS500

(2) Internally terminated

# 17.4 Pressure transducer connectors - only for /W option

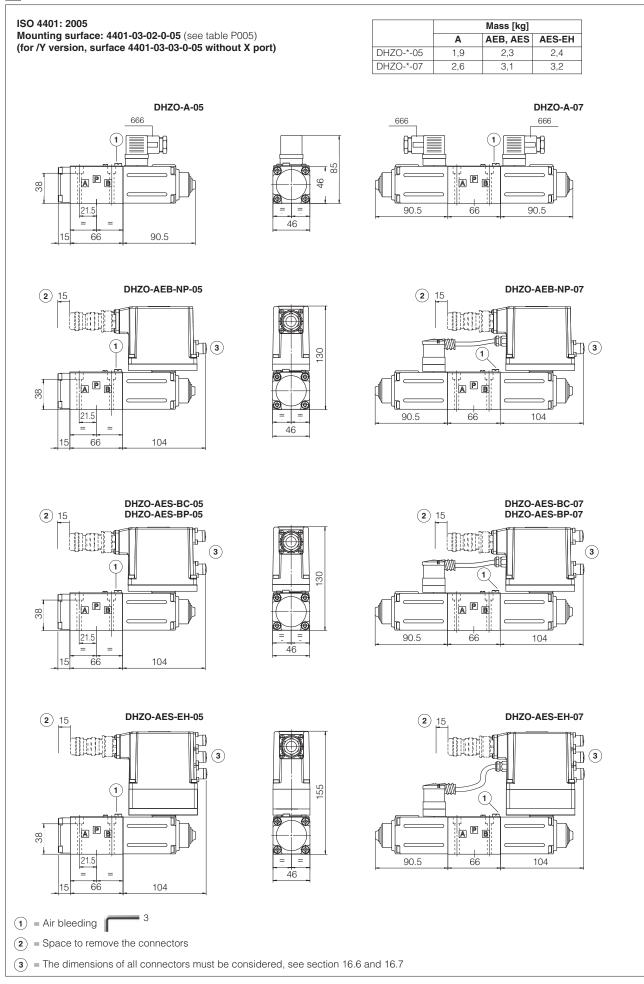

CONNECTOR TYPE	TRANSDUCER			
CODE	D1	ZH-5PM/1.5	D1	ZH-5PM/5
Туре	5 pin male straight circular			
Standard	M12 coding A – IEC 61076-2-101			
Material	Plastic			
Cable gland	Connector moulded on cables			
Cable giand	1,5 m lenght 5 m lenght		5 m lenght	
Cable	5 x 0,25 mm <sup>2</sup>			
Connection type	molded cable			
Protection (EN 60529)	IP 67			

# 18 FASTENING BOLTS AND SEALS

	DHZO	DKZOR
	<b>Fastening bolts:</b> 4 socket head screws M5x50 class 12.9 Tightening torque = 8 Nm	<b>Fastening bolts:</b> 4 socket head screws M6x40 class 12.9 Tightening torque = 15 Nm
0	Seals: 4 OR 108 Diameter of ports A, B, P, T: Ø 7,5 mm (max) 1 OR 2025 Diameter of port Y: Ø 3,2 mm (only for /Y option)	Seals: 5 OR 2050 Diameter of ports A, B, P, T: Ø 11,2 mm (max) 1 OR 108 Diameter of port Y: Ø 5 mm (only for /Y option)

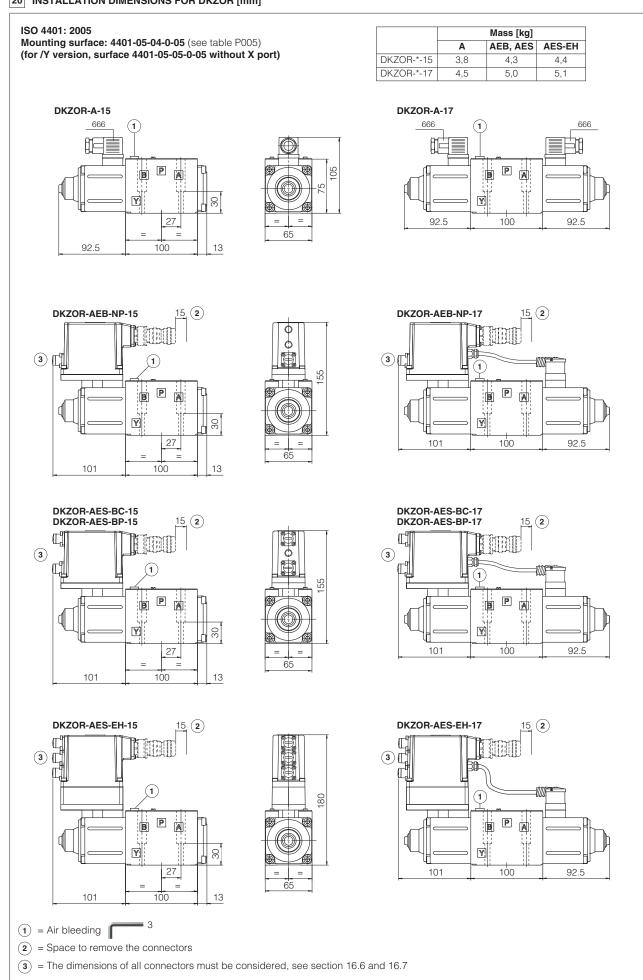

# 19 INSTALLATION DIMENSIONS FOR DHZO [mm]

Note: for option /B the solenoid and the on-board digital driver are at side of port A

Note: for option /B the solenoid and the on-board digital driver are at side of port A
