SOLENOID OPERATED DIRECTIONAL CONTROL VALVE COMPACT VERSION

SUBPLATE MOUNTING ISO 4401-03

p max **280** bar
Q max **50** l/min

MOUNTING SURFACE

OPERATING PRINCIPLE

- Direct acting, subplate mounting directional control valve, with mounting surface according to ISO 4401-03 standards.
- Compact design with reduced solenoid dimensions, suitable for mini-power packs and mobile and agricultural applications.
- The valve body is made with high strength iron castings provided with wide internal passages in order to minimize the flow pressure drop. Wet armature solenoids with interchangeable coils are used (for further information on solenoids see paragraph 7).

PERFORMANCES (with mineral oil of viscosity of 36 cSt at 50°C)

Recommended viscosity	cSt	25	
Masse: single solenoid valve double solenoid valve	kg	1,1 1,4	

- The valve is supplied with 3 or 4 way designs and with several interchangeable spools with different porting arrangements.

- The valve is available with DC or AC current solenoids and with several types of electrical connections to cover various installation requirements (see paragraphs 7 and 11).

- The DC valve comes with boot protected manual override which ensures a protection degree IP69K for connections types WK7 and WK8.

- It is available also with zinc-nickel surface treatment, that ensures a salt spray resistance up to 600 hours.

Seals:

N = NBR seals for mineral oil (**standard**)
V = FPM seals for special fluids

Option:
Surface treatment non standard.
Omit if not required (see **NOTE 2**)

Manual override (see par. 13)
on **DC** version:
omit for boot manual override integrated in the coil locking ring
CK1 = knob manual override
on **AC** version:
omit for manual override integrated in the tube
CM = manual override boot protected

A110 = 110 V - 50 Hz
A230 = 230 V - 50 Hz

A00 = valve without coils (see **NOTE 1**)

NOTE 1: Coils locking ring and related OR are supplied together with valves.

NOTE 2: The standard surface treatment is phosphating black. On request we can supply these valves with zinc-nickel finishing, making the valve suitable to ensure a salt spray resistance up to **600** hours (test operated according to UNI EN ISO 9227 standard and test evaluation operated according to UNI EN ISO 10289 standard)
Add **/W7** at the end of the identification code.

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals (code N). For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other fluid types such as HFA, HFB, HFC, please consult our technical department.

Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics. The fluid must be preserved in its physical and chemical characteristics.

3 - SPOOL TYPE

Type S*:
2 solenoids - 3 positions
with spring centering

Type SA*:

5 - OPERATING LIMITS

The curves define the flow rate operating fields according to the valve pressure of the different versions. The values indicated in the graphs are relevant to the standard solenoid valve.

The operating limits can be considerably reduced if a 4-way valve is used as 3-way valve with port A or B plugged or without flow.

The values have been obtained according to ISO 6403 norm with solenoids at rated temperature and supplied with voltage equal to 90% of the nominal voltage. The value have been obtained with mineral oil, viscosity 36 cSt, temperature 50 °C and filtration according to ISO 4406:1999 class 18/16/13.

7 - ELECTRICAL FEATURES

7.1 - Solenoids

These are essentially made up of two parts: tube and coil. The tube is threaded into the valve body and includes the armature that moves immersed in oil, without wear. The inner part, in contact with the oil in the return line, ensures heat dissipation.

The coil is fastened to the tube by a threaded ring, and can be rotated +/- 90°, to suit the available space.

The interchangeability of coils of different voltages is allowed within the same type of supply current, alternating or direct.

Protection from atmospheric agents IEC 60529

The IP protection degree is intended for the whole valve. It is guaranteed only with both valve and connectors of an equivalent IP grade, correctly connected and installed.

(*) The protection degree IP69K is not taken into account in IEC 60529 but it is included in both ISO 20653.

SUPPLY VOLTAGE FLUCTUATION	± 10% Vnom
MAX SWITCH ON FREQUENCY	10.000 ins/hr
DUTY CYCLE	100%

CLASS OF PROTECTION Coil insulation (VDE 0580) Impregnation	class H class H

NOTE: In order to further reduce the emissions, with DC supply, use of type H connectors is recommended. These prevent voltage peaks on opening of the coil supply electrical circuit (see cat. 49 000).

7.2 - DC valve - Current and power consumption

In direct current energizing, current consumption stays at fairly constant values, essentially determined by Ohm's law: $V = R \times I$

"R" coils have to be used when the valve is fed with AC power supply subsequently rectified by means of rectifier bridge, externally or incorporated in the "D" type connector (see cat. 49 000).

The table shows current and power consumption values for DC and RC coil types.

R230	230	1640	0,11		26,4	1902743				

7.3 - AC valve - Current and power consumption

In alternating current energizing, an initial phase (maximum movement) is seen, during which the solenoid consumes elevated value currents (inrush current); the current values diminish during the plunger stroke until it reaches the minimum values (holding current) when the plunger reaches the stroke end. The table shows the values of absorption at the inrush and at holding.

10 - INSTALLATION

Configurations with centering and return springs can be mounted in any position; type RK valves - without springs and with mechanical detent - must be mounted with the longitudinal axis horizontal.

Valve fitting takes place by means of screws or tie rods, fixing the valve on a lapped surface, with values of planarity and smoothness that are equal to or better than those indicated in the drawing.

If the minimum values of planarity or smoothness are not met, fluid leakages between valve and mounting surface can easily occur.

12 - ELECTRIC CONNECTORS

Solenoid operated valves are delivered without connectors. Connectors type EN 175301-803 (ex DIN 43650) for K1 connections can be ordered separately. See catalogue 49 000. We do not delivery connectors for connections K2, WK7 and WK8.

13 - OPTIONAL MANUAL OVERRIDES

13.1 - Boot protected manual override

On the DC version the boot override is integrated in the coil locking ring, as standard.

On the AC version, however, the boot override can be ordered by entering the code **CM** in the identification code at par. 1, or is available as option to be ordered separately.

code **3401210001**.

13.2 - Knob manual override

Available only for DC version

Max stroke: 4.5 mm

mm per turn: 1

The knob override can be ordered by entering the code **CK1** in the identification code at par. 1, or is available as option to be ordered separately.
