

Proportional directional valves high performance

piloted, with two LVDT transducers and positive spool overlap

DPZO-L

Proportional directional valves, piloted, with two LVDT position transducers and positive spool overlap for best dynamics in directional controls and not compensated flow regulations.

The valves operate in association with digital off-board divers, see section 3.

The two LVDT transducers (pilot and main stage) grant very high regulation accuracy and response sensitivity.

With de-energized proportional solenoids, mechanical central position of the spool is performed by centering springs

Spools regulation characteristics:

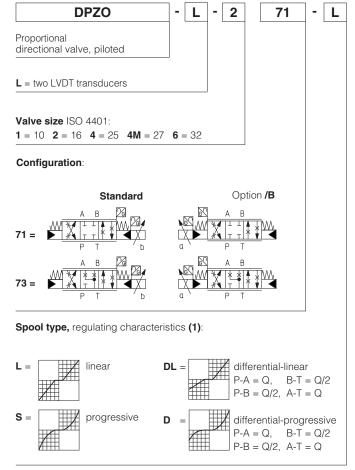

I = linear

S = progressive for fine low flow control D and DL = differential, for control of actuators with area ratio 1:2

D9 and L9 = for regenerative circuit Q5 and V9 = for alternate P/Q control

Size: **10** ÷ **32** - ISO 4401 Max flow: **180** ÷ **1600 l/min** Max pressure: **350 bar**

8.1 Regulation diagrams (values measure at Δp 10 bar P-T)

2A = DL5 (P \rightarrow A, A \rightarrow T) **2B** = DL5 (P \rightarrow B, B \rightarrow T) 1 = 1.53 = S5 $4A = D5 (P \rightarrow A, A \rightarrow T)$

 $\mathbf{4B} = D5 \ (P \rightarrow B, B \rightarrow T)$

DPZO-2:

7A = D3 (P \rightarrow A, A \rightarrow T) 5 = 1.3

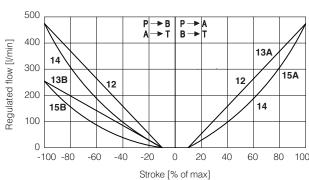

7B = D3 (P \rightarrow B, B \rightarrow T) 6 = S3

DPZO-2:

9A = DL5 (P \rightarrow A, A \rightarrow T) **9B** = DL5 (P \rightarrow B, B \rightarrow T) 8 = L5**10** = S5

11A = D5 (P \rightarrow A, A \rightarrow T) **11B** = D5 (P \rightarrow B, B \rightarrow T)

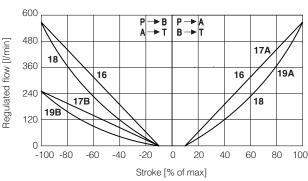

DPZO-4:

13A = DL5 ($P \rightarrow A, A \rightarrow T$) **12** = L5

13B = DL5 ($P \rightarrow B, B \rightarrow T$) 14 = S5

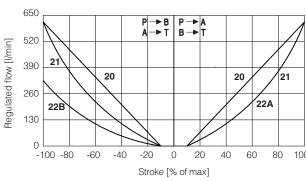

15A = D5 (P \rightarrow A, A \rightarrow T) **15B** = D5 (P \rightarrow B, B \rightarrow T)

DPZO-4M:

17A = DL5 (P \rightarrow A, A \rightarrow T) **16** = L5

17B = DL5 ($P \rightarrow B, B \rightarrow T$) **19A** = D5 ($P \rightarrow A, A \rightarrow T$) **19B** = D5 ($P \rightarrow B, B \rightarrow T$) 18 = S5

DPZO-6:

22A = D5 (P \rightarrow A, A \rightarrow T) **20** = L5

22B = D5 ($P \rightarrow B, B \rightarrow T$) **21** = S5

Note:

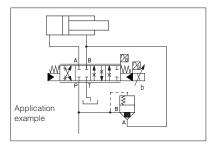

Hydraulic configuration vs. reference signal (standard and option /B)

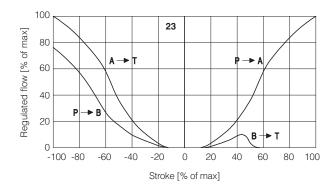

Reference signal $\begin{array}{cc} 0 \div +10 \text{ V} \\ 12 \div 20 \text{ mA} \end{array} \right\} \text{ P} \rightarrow \text{A} / \text{B} \rightarrow \text{T}$

Reference signal $\begin{array}{c} 0 \div -10 \text{ V} \\ 12 \div 4 \text{ mA} \end{array} \right\} \text{ P} \rightarrow \text{B} / \text{A} \rightarrow \text{T}$

23 = differential - regenerative spool **D9** (not available for valve size 32 and 35)

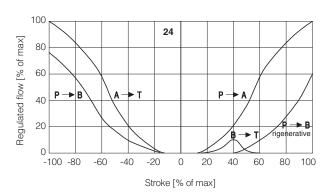

D9 spool type with a fourth position specific to regenerative circuit, performed by means of an additional external check valve.

24 = linear - internal regenerative spool L9 (available only for valve size 16)

L9 spool type with a fourth position specific to perform a regenerative circuit internal to the valve.

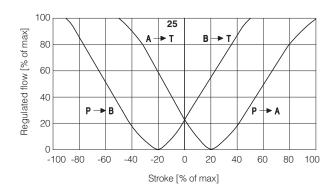

25 = linear spool Q5 (not available for valve size 32 and 35)

Q5 spool type is specific for alternate P/Q controls in combination with S^* option of digital integral drivers, (see tech. table **FS500**).

It allows to control the pressure in A port or B port and it provides a safety central position (A-T/B-T) to depressurize the actuator chambers.

The strong meter-in characteristic makes the spool suitable for both pressure control and motion regulations in several applications.

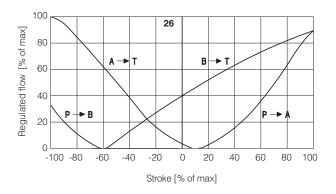

26 = differential - progressive spool V9

V9 spool type is specific for alternate P/Q controls in combination with S^* option of digital integral drivers (see tech table **FS500**).

This spool is specially designed to manage the whole injection cycle in plastic machinery, thanks to the following specific features:

- strong meter-in characteristic to allow the pressure control in A port during the holding pressure (P-A) and the plasticizing (A-T) phases
- safety central position (A-T/B-T) to depressurize the actuator chambers
- large A-T and B-T flow capability, required during the plasticizing phase, to discharge big volumes from high differential injection cylinders with low pressure drops and permitting the contemporary oil suction from tank

8.3 Response time

The response times in below diagrams are measured at different steps of the reference input signal. They have to be considered as average values. For the valves with digital electronics the dynamics performances can be optimized by setting the internal software parameters.

9 HYDRAULIC OPTIONS

- **B** = Solenoid and LVDT transducer at side of port B of the main stage (side A of pilot valve). For hydraulic configuration vs reference signal, see 8.1
- **D** = Internal drain (through port T).

Pilot and drain configuration can be modified as shown in the functional scheme here aside. For detailed view of plugs position, see section 12
The valve's standard configuration provides internal pilot and external drain.

E = External pilot (through port X).

Pilot and drain configuration can be modified as shown in the functional scheme here aside. For detailed view of plugs position, see section 12

The valve's standard configuration provides internal pilot and external drain.

G = Pressure reducing valve ③ with fixed setting, installed between pilot valve and main body. Reduced pressure setting:

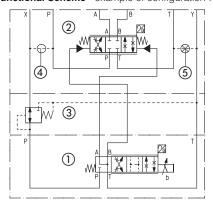

DPZO-2 = **28 bar**

DPZO-1, DPZO-4(M) and DPZO-6 = 40 bar

It is advisable for valves with internal pilot in case of system pressure higher than 200 bar.

Pressure reducing valve ③ is standard for DPZO-1, for other sizes add /G option.

Functional Scheme - example of configuration 71

- 1) Pilot valve
- ② Main stage
- ③ Pressure reducing valve
- 4) Plug to be added for external pilot trough port X
- (5) Plug to be removed for internal drain through port T

10 ELECTRICAL CONNECTION

12 PLUGS LOCATION FOR PILOT/DRAIN CHANNELS

Depending on the position of internal plugs, different pilot/drain configurations can be obtained as shown below To modify the pilot/drain configuration, proper plugs must only be interchanged. The plugs have to be sealed using loctite 270. Standard valves configuration provides internal pilot and external drain.

DPZO-1 Pilot channels

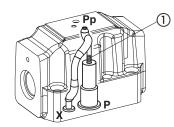

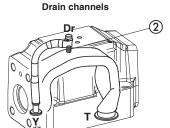

Drain channels

Internal piloting: blinded plug SP-X300F ① in X; External piloting: blinded plug SP-X300F ② in Pp; Internal drain: blinded plug SP-X300F ③ in Y;

External drain: blinded plug SP-X300F 4 in Dr.

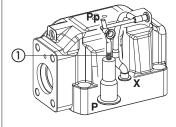

DPZO-2 Pilot channels

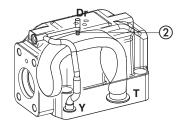

Internal piloting: Without blinded plug SP-X300F ①; External piloting: Add blinded plug SP-X300F ①; Without blinded plug SP-X300F 2; Internal drain: **External drain:** Add blinded plug SP-X300F ②.

DPZO-4 Pilot channels

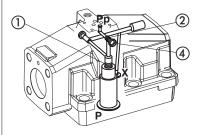

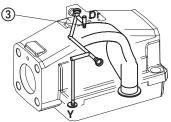

Internal piloting: Without blinded plug SP-X500F ①; External piloting: Add blinded plug SP-X500F ①; Without blinded plug SP-X300F 2; Internal drain: External drain: Add blinded plug SP-X300F 2

DPZO-6 Pilot channels

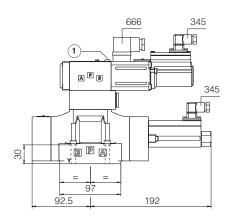

Internal piloting: Without plug ①;

External piloting: Add DIN-908 M16x1,5 in pos ①; Without blinded plug SP-X300F 3; Internal drain: External drain: Add blinded plug SP-X300F 3.
