

## Digital proportional reducing valves

piloted, without transducer, subplate or modular mounting

#### RZGO-A, RZGO-AEB, RZGO-AES HZGO-A, KZGO-A

Spool type, piloted, digital proportional reducing valves for pressure open loop controls, available in subplate size 06 or modular mounting size 06 and 10

A to be coupled with off-board driver.

**AEB** basic execution, with on-board digital driver, analog reference signals and USB port for software functional parameters setting.

**AES** full execution, with on-board digital driver which includes also fieldbus interface for functional parameters setting, reference signals and real-time diagnostics.

 RZGO, HZGO:
 KZGO:

 Size: 06 - ISO 4401
 Size: 10 - ISO 4401

 Max flow: 40 l/min
 Max flow: 100 l/min

 Max pressure: 350 bar
 Max pressure: 350 bar

#### 1 MODEL CODE

### 2 HYDRAULIC SYMBOLS

(2) Only for BC, BP, EH

(4) Possible combined options: IQ, IZ

### 3 OFF-BOARD ELECTRONIC DRIVERS - only for A

#### 4 GENERAL NOTES

Atos digital proportionals valves are CE marked according to the applicable directives (e.g. Immunity and Emission EMC Directive). Installation, wirings and start-up procedures must be performed according to the general prescriptions shown in tech table **FS900** and in the user manuals included in the E-SW-\* programming software.

USB or Bluetooth connection

E-C-SB-M12/BTH cable

E-C-SB-USB/M12 cable

E-A-SB-USB/BTH adapter

E-A-SB-USB/OPT isolator

AES

AEB

#### 5 VALVE SETTINGS AND PROGRAMMING TOOLS

Valve's functional parameters and configurations, can be easily set and optimized using Atos E-SW programming software connected via USB port to the digital driver (see table **FS900**). For fieldbus versions, the software permits valve's parameterization through USB port also if the driver is connected to the central machine unit via fieldbus.

The software is available in different versions according to the driver's options (see table GS500):

 E-SW-BASIC
 support
 NP (USB)
 PS (Serial)
 IR (Infrared)

 E-SW-FIELDBUS
 support
 BC (CANopen)
 BP (PROFIBUS DP)
 EH (EtherCAT)

 E-SW-\*/PQ
 support
 EW (POWERLINK)
 EI (EtherNet/IP)
 EP (PROFINET)

 E-SW-\*/PQ
 support
 valves with SP, SF, SL alternated control (e.g. E-SW-BASIC/PQ)

**∠**••

**WARNING: drivers USB port is not isolated!** For E-C-SB-USB/M12 cable, the use of isolator adapter is highly recommended for PC protection

WARNING: see tech table GS500 for the list of countries where the Bluetooth adapter has been approved

### 6 FIELDBUS - only for AES, see tech. table GS510

Fieldbus allows valve direct communication with machine control unit for digital reference, valve diagnostics and settings. These execution allow to operate the valves through fieldbus or analog signals available on the main connector.

#### 7 GENERAL CHARACTERISTICS

| A le la caractería de   | A management of the control of the c |  |  |  |  |

| Surface protection Zinc coating with black passivation, galvanic treatment (driver housing for AEB and AES) |  |  |  |  |  |
| Corrosion resistance  | Salt spray test (EN ISO 9227) > 200 h  |  |  |  |  |
| Compliance  | CE according to EMC directive 2014/30/EU (Immunity: EN 61000-6-2; Emission: EN 61000-6-3) RoHS Directive 2011/65/EU as last update by 2015/65/EU REACH Regulation (EC) n°1907/2006   |  |  |  |  |

#### 8 HYDRAULIC CHARACTERISTICS - based on mineral oil ISO VG 46 at 50 °C

| Valve model   |         | RZGO, HZGO               | KZGO               |  |
|---|---------|--------------------------|--------------------|--|
| Max regulated pressure  | [bar]   | 50; 100; 210; 315; 350   | 100; 210; 315; 350 |  |
| Max pressure at port P  | [bar]   | 38                       | 50                 |  |
| Max pressure at port T  | [bar]   | 2                        | 10                 |  |
| Min regulated pressure (1) [bar]                                      |         | 1,0; 3,0 (only for /350) |                    |  |
| Min flow  | [l/min] | 2,5                      | 3                  |  |
| Max flow [I/min]  |         | 40                       | 100                |  |
| Response time 0-100% step signal (depending on installation) (2) [ms] |         | ≤50                      | ≤80                |  |
| Hysteresis  |         | ≤2 [% of max pressure]   |                    |  |
| Linearity   |         | ≤3 [% of max pressure]   |                    |  |
| Repeatability ≤2 [% of max pressure]                                  |         |                          |                    |  |

Note: above performance data refer to valves coupled with Atos electronic drivers, see section 3

- (1) Min pressure value to be increased of T line pressure
- (2) Average response time value; the pressure variation in consequence of a modification of the reference input signal to the valve is affected by the stiffness of the hydraulic circuit: greater is the stiffness of the circuit, faster is the dynamic response

### 9 ELECTRICAL CHARACTERISTICS

| Power supplies  | Nominal<br>Rectified and filtered  | : +24 VDC<br>: VRMS = 20 ÷ 32 VMAX              | (ripple max 10 % VPP)              |  |

6 = P1-T (dotted line /350)

**7** = P-P1

#### 12 ELECTRONIC OPTIONS - only for AEB and AES

- I = This option provides 4 ÷ 20 mA current reference and monitor signals, instead of the standard 0 ÷ 10 VDC. Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of ±10 VDC or ±20 mA. It is normally used in case of long distance between the machine control unit and the valve or where the reference signal can be affected by electrical noise; the valve functioning is disabled in case of reference signal cable breakage.
- Q = This option permits to inhibit the valve function without removing the power supply to the driver. Upon disable command the current to the solenoid is zeroed and the valve's spool moves to rest position.

The option /Q is suggested for all cases where the valve has to be frequently inhibited during the machine cycle – see 16.5 for signal specifications.

**Z** = This option provides, on the 12 pin main connector, the following additional features:

Fault output signal - see 16.6

Enable input signal - see above option /Q

Power supply for driver's logics and communication - see 16.2

#### 13 POSSIBLE COMBINED OPTIONS

Electronics options: /IQ, /IZ

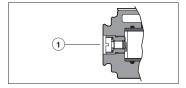

#### 14 COIL VOLTAGE OPTIONS - only for A

- 6 = Optional coil to be used with Atos drivers with power supply 12 VDC.
- 18 = Optional coil to be used with electronic drivers not supplied by Atos.

#### 15 AIR BLEEDING

At the first valve commissioning the air eventually trapped inside the solenoid must be bled-off though the screw ① located at the rear side of the solenoid housing.

The presence of air may cause pressure instability and vibrations.

#### 16 POWER SUPPLY AND SIGNALS SPECIFICATIONS - only for AEB and AES

Generic electrical output signals of the valve (e.g. fault or monitor signals) must not be directly used to activate safety functions, like to switch-ON/OFF the machine's safety components, as prescribed by the European standards (Safety requirements of fluid technology systems and components-hydraulics, ISO 4413).

#### 16.1 Power supply (V+ and V0)

The power supply must be appropriately stabilized or rectified and filtered: apply at least a 10000  $\mu$ F/40 V capacitance to single phase rectifiers or a 4700  $\mu$ F/40 V capacitance to three phase rectifiers. In case of separate power supply see 16.2.

A safety fuse is required in series to each power supply: 2,5 A time lag fuse.

#### 16.2 Power supply for driver's logic and communication (VL+ and VL0) - only for /Z option

The power supply for driver's logic and communication must be appropriately stabilized or rectified and filtered: apply at least a 10000  $\mu$ F/40 V capacitance to single phase rectifiers or a 4700  $\mu$ F/40 V capacitance to three phase rectifiers.

The separate power supply for driver's logic on pin 9 and 10, allow to remove solenoid power supply from pin 1 and 2 maintaining active the diagnostics, USB and fieldbus communications.

 $\bigwedge$  A safety fuse is required in series to each driver's logic and communication power supply: 500 mA fast fuse.

#### 16.3 Reference input signal (INPUT+)

The driver controls in closed loop the current to the valve proportionally to the external reference input signal.

Reference input signal is factory preset according to selected valve code, defaults are  $0 \div 10 \text{ Vpc}$  for standard and  $4 \div 20 \text{ mA}$  for /I option. Input signal can be reconfigured via software selecting between voltage and current, within a maximum range of  $\pm 10 \text{ Vpc}$  or  $\pm 20 \text{ mA}$ . Drivers with fieldbus interface (BC, BP, EH) can be software set to receive reference signal directly from the machine control unit (fieldbus reference). Analog reference input signal can be used as on-off commands with input range  $0 \div 24 \text{Vpc}$ .

#### 16.4 Monitor output signal (MONITOR)

The driver generates an analog output signal (MONITOR) proportional to the actual coil current of the valve; the monitor output signal can be software set to show other signals available in the driver (e.g. analog reference, fieldbus reference).

Monitor output signal is factory preset according to selected valve code, default settings is  $\pm 5$  Vpc (1V = 1A).

Output signal can be reconfigured via software, within a maximum range of 0 ÷ 5 VDC.

#### 16.5 Enable input signal (ENABLE) - not for standard

To enable the driver, supply a 24 Vpc on pin 3 (pin C): Enable input signal allows to enable/disable the current supply to the solenoid, without removing the electrical power supply to the driver; it is used to active the communication and the other driver functions when the valve must be disabled for safety reasons. This condition **does not comply** with norms IEC 61508 and ISO 13849. Enable input signal can be used as generic digital input by software selection.

#### 16.6 Fault output signal (FAULT) - only for /Z option

Fault output signal indicates fault conditions of the driver (solenoid short circuits/not connected, reference signal broken for 4 ÷ 20 mA input, etc.). Fault presence corresponds to 0 Vpc, normal working corresponds to 24 Vpc. Fault status is not affected by the Enable input signal.

### 17 ELECTRONIC CONNECTIONS

### 17.1 Main connector signals - 7 pin $\stackrel{\hbox{$(A1)}}{}$ Standard and $^{\prime}$ Q option - for AEB and AES

| PIN | /Z      | TECHNICAL SPECIFICATIONS  | NOTES                                      |  |
|-----|---------|---|--|--|
| 1   | V+      | Power supply 24 Vpc   | Input - power supply                       |  |
| 2   | V0      | Power supply 0 Vpc  | Gnd - power supply                         |  |
| 3   | ENABLE  | Enable (24 VDC) or disable (0 VDC) the driver, referred to VL0  | Input - on/off signal                      |  |
| 4   | INPUT+  | Reference input signal: ±10 Vpc / ±20 mA maximum range Defaults are 0 ÷ 10 Vpc for standard and 4 ÷ 20 mA for /I option | Input - analog signal Software selectable  |  |
| 5   | INPUT-  | Negative reference input signal for INPUT+  | Input - analog signal                      |  |
| 6   | MONITOR | Monitor output signal: ±5 Vpc maximum range, referred to VL0 Default is 0 ÷ 5 Vpc (1V = 1A)                             | Output - analog signal Software selectable |  |
| 7   | NC      | Do not connect  |  |  |
| 8   | NC      | Do not connect  |  |  |
| 9   | VL+     | Power supply 24 Vpc for driver's logic and communication  | Input - power supply                       |  |
| 10  | VL0     | Power supply 0 Vpc for driver's logic and communication Gn  |  |  |
| 11  | FAULT   | Fault (0 Vpc) or normal working (24 Vpc), referred to VL0  Output - on/off sign   |  |  |
| PE  | EARTH   | Internally connected to driver housing  |  |  |

Note: do not disconnect VL0 before VL+ when the driver is connected to PC USB port

### 17.3 Communication connectors - for AEB $\, \textcircled{B} \,$ and AES $\, \textcircled{B} \,$ - $\, \textcircled{C} \,$

| В   | B USB connector - M12 - 5 pin always present |                             |  |  |  |
|-----|--|-----------------------------|--|--|--|
| PIN | SIGNAL                                       | TECHNICAL SPECIFICATION (1) |  |  |  |
